6. Rationale: State the hypothesis and reasoning on which the proposed research project is based. Briefly describe how preliminary data, scientific rationale, and referenced literature support the research hypothesis. Clearly demonstrate that there is sufficient rationale for the project.

7. Focus Area: State the Research Priority that the proposed study seeks to address

- Neurobiological interaction:** Elucidate the points of interaction between RLS-relevant neuro-transmitters and neuropathways and iron deficiency.
- Pharmacologic treatments:** Elucidate effects of novel pharmacological approaches on RLS.
- Clinical Practice:** Research based on innovations in patient care delivery including but not limited to population health programs, technology-enabled healthcare delivery (i.e.; telemedicine) and public health initiatives.
- Other topics:** Other research areas accepted for funding consideration.

8. Specific Aims and Study Design: Clearly describe the type of research study being proposed. Concisely state the project's objectives, specific aims, and ultimate endpoints. As applicable, briefly describe the proposed recruitment strategies and methods, how they will accomplish the project's aims, as well as the outcome measures that will be used.

9. Research Team: Provide a description of the research team that clearly demonstrates the appropriate background and experience to accomplish the proposed work.

10. Impact and Relevance to RLS: Describe how the proposed work will impact healthcare and quality-of-life needs for patients and/or family members or beneficiaries living with RLS.
